

learnPro NHS | ESR Synchronisation

ESR Synchronisation provides your organisation with a solution to address the issue of having to transfer user data from learnPro NHS to the Electronic Staff Record (ESR).

MDC Learning Systems provide three options for organisations to transfer user data to the ESR. Option 1 is offered as a manual process, while options 2 and 3 are offered as automated processes. The second and third options, being automated, would need co-operation from McKesson to provide a way to upload user information from learnPro NHS if this process does not already exist. The manual process provides the easiest way forward to creating a process to transfer data between the two systems.

OPTION 1

Option 1 is a manual process which involves running a new report that has been created on learnPro NHS. This is called the ESR Report. The information on this report can be exported through various types of file then uploaded to the ESR. The datafile being transferred to the ESR could contain fields such as sync I.D, passed date, module name and course name. The crucial thing to make this work is having a unique identifier when the user registers with learnPro NHS and will also be accepted by the ESR. This can be updated by administrators as and when required.

OPTION 2

Option 2 is an automated process which involves the setting up of a secure FTP. This would be a non-live reporting system which could be automated by a simple scheduler to run overnight. This provides a regular automated way to update your staff records everyday to the ESR.

OPTION 3

Option 3 is also an automated process which involves setting a webservices connection to the ESR. This simply means that our server would provide a service by transferring data to the ESR. This would be a live system capable of handling high volumes of data to the ESR. This process can be scheduled to run every few minutes, every hour or every few hours. The timing of the scheduling is flexible to your requirements.
